

My Proof Statement

What am I proving, and to whom?

Primary Claim

I can combine GIS layers with historical electoral results to identify the districts in Salta with the greatest potential for change.

Specific Audience

My proof is designed for Chris, a political campaign leader who needs actionable territorial intelligence to prioritize resources and make data-driven decisions.

Key Action

I want Chris to visit my portfolio and directly explore my electoral analysis of Salta 2023.

Full Proof Statement (One Paragraph)

My proof demonstrates that I can combine GIS layers with historical results to reveal the districts with the greatest potential for change in Salta. My audience is Chris, a campaign leader who needs geospatial information for his political analysis. The single action I want Chris to take is to visit my portfolio and see my political analysis of Salta province (Argentina, 2023).

The "Why" Line (My Honest Motivation)

I need this because my CV only shows teaching experience, but it doesn't prove that I can transform raw, messy geospatial data into actionable political intelligence – and this project demonstrates exactly that.
