

Draw the Path: Portfolio Sitemap + Toolkit

Details

Why it matters: Once you know what you're proving and the action, the pages almost choose themselves: a place to land, the work that proves it, who you are, and how to act. And getting your free tools open this week means nothing stands between you and starting next week.

Brief:

1. Sketch a portfolio sitemap, the few pages it takes to walk your one person from landing to believing you to the one action (usually: a hero that states the claim, a work/case-studies section, a short about, a contact), and nothing more. Resist adding pages "just because."

Page **HOME**

Purpose: "I help to content teams and data scientists to prioritize" *"Ayudo a equipos de contenido y científicos de datos a priorizar qué páginas revisar primero usando Machine Learning. Mi enfoque combina datos satelitales y modelos explicables para tomar decisiones basadas en evidencia."*

Main button: **"My work"** (it takes the user to "Work" page).

Page **WORK / CASE STUDIES**

Purpose: **Air temperatura estimation using MODIS Land Surface Temperature images and Random Forest**

"I built a model which predicts air minimum and maximum temperature near the surface, for the Abruzzo region in Italy. I combined MODIS satellite data, elevation and other ancillary variables. I used Random Forest and Multiple linear regression, from which the former performed better (R^2 0.93 for both temperatures). I used 113 and 33 meteorological stations, for training and testing stages respectively. The training and testing stages involved 4 images per day from 2017 to 2019, and from 2020 to 2022, respectively."

Page ABOUT

Purpose: *“My name is Sergio Daniel Paz, I am a physicist and hold a Master in Space information Application. I have a diploma in Generative AI, and I have been giving lectures at the National University of Salta since 2013 in several subjects such as: python programming, analog electronics, digital electronics, electrical circuits and fluid mechanics. I also studied Data Science at CoderHouse, and I am always incurring into applying ML to real life problems, whether I use geospatial data or not, in order to help others comprehend their data.”*

Page CONTACT

Purpose: Get in touch with me at: sergiodanielpaz13@gmail.com

Or you can also find me in: <https://www.linkedin.com/in/sergio-daniel-paz/>

-
2. Set up your free toolkit: accounts for Claude, ChatGPT, Gemini, and Perplexity.

I already showed my Claude account.

-
3. Create one Claude Project named for this build, with custom instructions (your proof statement pasted in) and a request to act as a tutor. It follows you for all eight weeks.

-
4. Run one real prompt: have it pressure-test your sitemap against your one action and your claim. Save the answer.

Claude's answer:

Assessed portfolio structure against conversion objectives

Stress-test results

1. Does it meet the objective (getting the visitor to contact you)?

Partially. The structure is logical and lean — that's good. But right now it's optimized for *informing* a visitor, not *converting* one. A single case study with no supporting evidence (no second project, no testimonial, no clear "why now") asks a visitor to make a hire/collaborate decision on very thin data. The path Home → Work → Contact works structurally, but nothing in it builds urgency or lowers the friction of reaching out. You have one shot to prove competence, and one case study is a gamble if it doesn't land with that specific visitor's use case.

2. Weakest page: Contact

Right now "Contact" is just two lines of text — an email and a LinkedIn URL. That's not a page, it's a footer. Problems:

- No call-to-action. What do you want them to do — email you about a job? A collaboration? A speaking request? "Contact me" is vague.
- No reason to act *now* instead of bookmarking and forgetting.
- Two channels with no guidance on which to use for what.
- Zero personality or warmth at the exact moment you want someone to take a personal risk (reaching out to a stranger).

A weak Contact page is costly precisely because it's the last step before your goal is achieved — friction here has an outsized effect on conversion.

3. What I'd change

- **Contact page:** Add one sentence of framing ("Open to research collaborations, consulting, or full-time roles in Earth observation and ML — reach out below") and make email the primary action (a `mailto:` button), LinkedIn secondary.
- **Work page:** One case study is thin for a portfolio whose job is to build trust. Even a shorter second example (or a "selected work" note that more is available on request) reduces the single-point-of-failure risk. If your thesis genuinely doesn't resonate with a given visitor's need, you have nothing else to show.
- **About page:** Ten years of teaching experience is currently just a background fact. If you're pitching yourself for research/industry roles, reframe it as a skill — communication, explaining complex technical material, mentoring — not just a timeline entry. Otherwise it reads as unrelated padding.
- **Home page:** The one-liner is good but has no proof or next step beyond "Work." Consider adding a single credibility marker near the CTA (e.g., "MSc in Satellite Applications, $R^2=0.93$ on thesis work") so visitors who don't click through still see the headline number.
- Missing entirely: a resume/CV download. For a job- or collaboration-seeking portfolio, many visitors want the artifact, not just a case study page.

4. The one thing I'd change first

Rewrite the Contact page from a sign-off into a closer. Right now it's an afterthought; it should be the page doing the most persuasive work per word, since it's the last thing standing between interest and action. A single framing sentence plus a clear primary action (`mailto:` button) will do more for your stated goal than any other single edit on this sitemap.
