

AI Workflow Audit and Tool Setup

Phase: Setup | **Estimated hours:** 4

Why it matters: You cannot improve a workflow you have never mapped. Knowing where AI helps, where it wastes your time, and where it should never be trusted is the core fluency skill; everything else builds on this audit.

Brief:

1. List 10 to 15 recurring tasks from your real week (study, work, side projects). Classify each: just me, delegate to AI with review, collaborate with AI, or fully automate. One line of rationale per task.

Task	Classification	Rationale
1. Develop practice exercises for my university students	Collaborate with AI	I gain time using AI for brainstorming, then I filter exercises and we polish them together.
2. Look for new job positions related to tutoring/teaching.	Just me	I know where and what to look. Then I read every job post to see if I fit.
3. Checking new e-mails.	Just me	I open my account and revise them
4. Prepare notes for the theoretical classes I give at the university.	Collaborate with AI	I feed the AI with material, then I decide what to include or leave out.
5. Translate English text into Spanish and vice versa.	Collaborate with AI	I do this very often, but I always check the meaning of the generated text.
6. Research about politics in my country, in order to be informed.	Collaborate with AI	I always want to be informed, and also I later check or go deep about some contents by myself.
7. Prepare slides for theoretical/practical classes.	Collaborate with AI	I generate text and comments for the slides, but I finally decide the final look of the presentations.
8. Develop content for my social media.	Collaborate with AI	I generate videos, text, pictures, but always giving feedback to the AI.

9. Plan my week.	Just me	What to do and when, is something only I manage.
10. Check my progress in the internship.	Just me	I evaluate myself if I am comprehending the concepts I am studying.

2. Set up your free toolkit: Claude, ChatGPT, and Anthropic Academy accounts. Enroll in AI Fluency: Framework & Foundations and complete at least the first module.

My Claude account:

Instructions for Claude

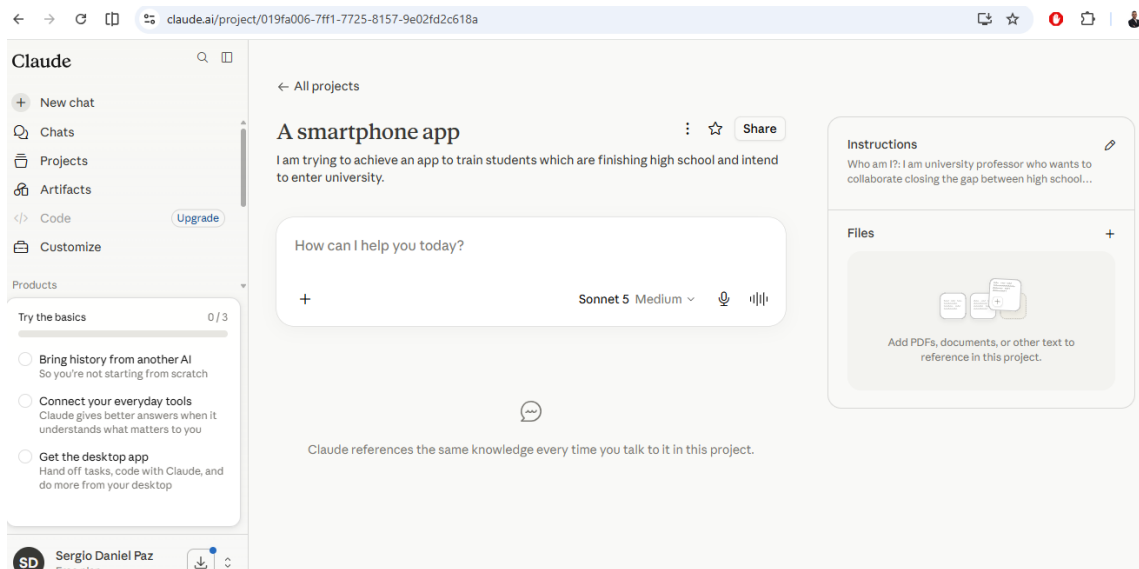

Claude will keep these in mind across chats and Cowork within Anthropic's guidelines. [Learn more](#)

Preferences

My AI Fluency: Framework & Foundations certificate:

3. Create one Claude Project with custom instructions: who you are, tone preferences, current goals.

Provide Claude with relevant instructions and information for chats within A smartphone app. This will work alongside your [profile instructions](#) and the selected style in a chat.

Tone preferences: I prefer direct responses. I would like you to explain to me "why" before giving me some code. Use a professional tone but friendly.

Cancel

4. Pick the three audit tasks you will reuse in FL-02 through FL-04, and define what "done well" means for each.

#	Selected task	Why this task?
1	Develop practical exercises for my students	I will use it to prepare teaching material while moving forward in the internship.
2	Translate text from spanish to english and viceversa.	I will use it to read documents in English language and take notes in Spanish.
3	Prepare notes for theoretical classes.	I will use it to sum up the ML concepts I learn in the internship.

What does “done well” mean?

Task 1

Exercises cover at least 3 key concepts for the class. They include at least 5 exercises with different difficulty levels. The preparation time doesn't take more than 90 minutes.

Task 2

The translation maintains the original technical meaning and professional tone. I use AI to first write the draft, and then I check it manually. I use AI to write the draft, then I review at least 5 phrases and correct any that don't sound natural. I deliver the final text without grammatical errors.

Task 3

The drafts sum clearly up the main concepts of the class in a maximum of 2 pages. They include at least 3 practical exercises. I use AI to organize information.
